Syndromic Surveillance - Overdose

Details

Source of Substance
Prescription - Prescribed for Another

Name of Legal Substance
Fentanyl

Method of Consumption
Transdermal

Estimated Consumption Time Date
16:55:50 05/20/2018

OVERDOSE FORMS

ESO EHR's Overdose Surveillance Form gives you the power to track overdose documentation in an easy to use form so you can improve responses and outcomes.

IDENTIFY PROVIDER SAFETY ISSUES.

Recognize if and when personnel are injured while responding to overdose calls. Safeguard providers by leveraging so you can provide appropriate training and develop stronger protocols to keep providers safe.

RECOGNIZE SUBSTANCE SOURCES & INGESTION.

Record how everything from alcohol to acetaminophen to stimulants are sourced and ingested by patients. Data can be analyzed to develop precise interventions for populations struggling with overdose and substance abuse.

TRACK PROTOCOL EFFECTIVENESS.

Know when overdose reversing drugs are left on scene or administered prior to arrival. One-step forms make it easy to catalog the use of Narcan in addition to knowing when Narcan Kits are left on the scene.

EMPOWER COMMUNITY PROGRAMS.

Substance abuse program entry on-scene has become a public health trend. Now you can record whether or not patients are interested in rehabilitation programs, currently in a rehabilitation program or are disinterested at the time of acute overdose. Insights can be mined to monitor the effectiveness and need for these programs.

MONITOR OVERDOSE TRENDS.

No matter the substance or source, you can now observe where overdoses are occurring in your area and which populations they impact the most, giving you the opportunity to be proactive in your response.

FROM A COMPANY YOU TRUST.

At ESO, we understand how first responders work because we've worn the uniform ourselves. Not only are our products designed for you — you'll feel like they were designed by you.
